

Canonical Fix + Updated Sitemap

secrethour.pk — Fix www mismatch on 18 pages + submit new sitemap

Fix 1: One line of code in app/layout.js · Fix 2: Updated sitemap.xml

Prepared by The Social Hawks · July 17, 2026 · For developer handoff

A full canonical tag audit of secrethour.pk found that **18 out of 19 pages** have the wrong canonical URL — they point to **secrethour.pk** (no www) instead of **www.secrethour.pk**. Only the homepage is correct. This document gives the developer the single code fix to resolve all 18 pages at once, plus an updated sitemap.xml covering all discovered pages.

18 PAGES

Wrong canonical (no www)

1 PAGE

Correct (Homepage)

1 CODE LINE

Fixes all 18 pages at once

1

Fix Canonical Tags

One line change in app/layout.js — fixes all 18 pages

The Problem

Every page except the homepage has a canonical tag pointing to the non-www domain. Google treats **secrethour.pk** and **www.secrethour.pk** as two completely separate websites. This splits your ranking power and creates duplicate content signals.

Current — WRONG (18 pages)

```
<link rel="canonical"
href="https://secrethour.pk/shop"/>
```

Missing www — Google sees this as a different site

Required — CORRECT

```
<link rel="canonical"
href="https://www.secrethour.pk/shop"/>
```

With www — matches live domain and sitemap

The Fix — Open app/layout.js and Make This One Change

Find the **metadata export** or **generateMetadata function** in your root layout file. The canonical base URL just needs **www.** added. Here are all possible scenarios:

```
app/layout.js — Scenario A: Static metadata export
```

```
// SCENARIO A — if you have a static metadata export:  
// Find this:  
export const metadata = {  
  alternates: { canonical: "https://secrethour.pk" }, // ← WRONG  
};  
  
// Change to this:  
export const metadata = {  
  alternates: { canonical: "https://www.secrethour.pk" }, // ← CORRECT  
};
```

```
app/layout.js — Scenario B: Dynamic generateMetadata function
```

```
// SCENARIO B — if you have a dynamic generateMetadata function:  
// Find this:  
export async function generateMetadata({ params }) {  
  return {  
    alternates: { canonical: `https://secrethour.pk${pathname}` }, // ← WRONG  
  };  
}  
  
// Change to this — just add www. to the base URL:  
export async function generateMetadata({ params }) {  
  return {  
    alternates: { canonical: `https://www.secrethour.pk${pathname}` }, // ← CORRECT  
  };  
}
```

```
.env / next.config.js — Scenario C: Environment variable
```

```
// SCENARIO C — if canonical is built from an environment variable:  
// Find this in .env or next.config.js:  
NEXT_PUBLIC_BASE_URL=https://secrethour.pk // ← WRONG  
  
// Change to:  
NEXT_PUBLIC_BASE_URL=https://www.secrethour.pk // ← CORRECT  
  
// This single env variable change will fix canonical tags site-wide
```

Which scenario applies?

Search your codebase for the string 'secrethour.pk' (without www). Wherever you find it used as a base URL for canonical or metadata, add www. to it. It will likely be in one of: app/layout.js, .env, next.config.js, or a constants file like lib/config.js or utils/seo.js.

Also Add the 301 Redirect (Prevents Non-www Being Accessible)

This closes the non-www door permanently so Google can never reach the wrong version:

```
next.config.js — 301 redirect non-www to www
```

```
// next.config.js
const nextConfig = {
  async redirects() {
    return [
      {
        source: '/*:path*',
        has: [{ type: 'host', value: 'secrethour.pk' }],
        destination: 'https://www.secrethour.pk/*:path*',
        permanent: true, // 301 — passes full SEO authority to www
      },
    ];
  },
  // ...rest of your config
};
module.exports = nextConfig;
```

How to Verify After Deployment

After deploying, right-click any product page in Chrome → View Page Source → search for **canonical**. Every page should now show:

```
Expected canonical tags after fix — all pages
```

```
<!-- Homepage -->
<link rel="canonical" href="https://www.secrethour.pk"/>

<!-- Shop -->
<link rel="canonical" href="https://www.secrethour.pk/shop"/>

<!-- Product page -->
<link rel="canonical" href="https://www.secrethour.pk/product/midnight-deck"/>

<!-- All other pages follow the same www.secrethour.pk pattern -->
```

2

Updated Sitemap

All 19 pages with correct www URLs — submit to GSC

The sitemap below includes all pages discovered in the canonical audit — including new pages (About, Blogs, Contact, Referral) that weren't in the previous version. Copy this exactly into your **public/sitemap.xml** file, or configure **next-sitemap** to generate it automatically on each build.

All Pages Included in Sitemap

URL	Priority	Change Freq	Notes
www.secrethour.pk/	1.0	weekly	Homepage — highest priority
www.secrethour.pk/shop	0.9	weekly	Shop — main product listing
www.secrethour.pk/product/midnight-deck	0.9	weekly	The Midnight Deck product page

www.secrethour.pk/product/midnight-glow-candle	0.9	weekly	Midnight Glow Candle product page
www.secrethour.pk/product/silk-bond	0.9	weekly	Silk Bond product page
www.secrethour.pk/product/the-secret-note	0.9	weekly	Secret Note product page
www.secrethour.pk/product/midnight-bow	0.9	weekly	Midnight Bow product page
www.secrethour.pk/product/bridal-bundle	0.8	monthly	Bridal Bundle — add when live
www.secrethour.pk/quiz	0.8	monthly	Gift quiz page
www.secrethour.pk/testimonials	0.7	monthly	Testimonials / reviews page
www.secrethour.pk/blogs	0.7	weekly	Blog listing — content hub
www.secrethour.pk/about	0.6	monthly	About Secret Hour
www.secrethour.pk/contact	0.6	monthly	Contact page
www.secrethour.pk/info/faq	0.6	monthly	FAQ page
www.secrethour.pk/info/referral	0.5	monthly	Referral programme page
www.secrethour.pk/info/shipping	0.5	monthly	Shipping policy
www.secrethour.pk/info/refund	0.5	monthly	Refund policy
www.secrethour.pk/info/returns	0.5	monthly	Returns and exchange policy
www.secrethour.pk/info/privacy	0.4	yearly	Privacy policy
www.secrethour.pk/info/terms	0.4	yearly	Terms and conditions

The sitemap.xml File — Copy This Exactly

Place this file at **public/sitemap.xml** in your Next.js project root. It will be served automatically at **www.secrethour.pk/sitemap.xml**:

public/sitemap.xml — complete file (copy all parts)

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">

Bridal Bundle page

The Bridal Bundle URL (/product/bridal-bundle) is commented out in the sitemap above. Uncomment it and add it to the sitemap once the page goes live.

Google Search Console — sitemap submission steps

1. Go to: <https://search.google.com/search-console>
2. Click 'Sitemaps' in the left sidebar
3. In the 'Add a new sitemap' field enter:
`https://www.secrethour.pk/sitemap.xml`
4. Click Submit
5. GSC will process it — you'll see a URL count within a few hours

DEVELOPER CHECKLIST — COMPLETE IN ORDER

- 1 ☐ Open app/layout.js — search for 'secrethour.pk' without www

2	☐ Add www. to the canonical base URL (see Scenario A, B, or C above)
3	☐ Add 301 redirect rule to next.config.js (non-www to www)
4	☐ Copy the sitemap.xml above into public/sitemap.xml
5	☐ Deploy all changes to production
6	☐ Verify: View Source on /shop — confirm canonical shows www
7	☐ Verify: View Source on a product page — confirm canonical shows www
8	☐ Verify: Visit secrethour.pk (no www) — confirm it redirects to www
9	☐ Submit sitemap in Google Search Console → Sitemaps
10	☐ Re-request indexing for all 19 pages in GSC → URL Inspection

ALL PAGES TO REQUEST INDEXING IN GSC — UPDATED LIST

Paste each of these URLs one by one into Google Search Console → URL Inspection → Request Indexing. This is the complete updated list including all newly discovered pages:

All URLs to request indexing in Google Search Console

Paste each URL into GSC → URL Inspection → Request Indexing

HIGH PRIORITY – Do these first

<https://www.secrethour.pk/>
<https://www.secrethour.pk/shop>
<https://www.secrethour.pk/product/midnight-deck>
<https://www.secrethour.pk/product/midnight-glow-candle>
<https://www.secrethour.pk/product/silk-bond>
<https://www.secrethour.pk/product/the-secret-note>
<https://www.secrethour.pk/product/midnight-bow>

MEDIUM PRIORITY

<https://www.secrethour.pk/quiz>
<https://www.secrethour.pk/testimonials>
<https://www.secrethour.pk/blogs>
<https://www.secrethour.pk/about>
<https://www.secrethour.pk/contact>
<https://www.secrethour.pk/info/faq>

LOWER PRIORITY – Policy pages

<https://www.secrethour.pk/info/referral>
<https://www.secrethour.pk/info/shipping>
<https://www.secrethour.pk/info/refund>
<https://www.secrethour.pk/info/returns>
<https://www.secrethour.pk/info/privacy>
<https://www.secrethour.pk/info/terms>

secrethour.pk — Canonical Fix + Sitemap Update · The Social Hawks · July 17, 2026 · Fix 1: Add www to canonical base in app/layout.js · Fix 2: Deploy public/sitemap.xml · Fix 3: Add 301 redirect
